Power BI – Extract Practice Questions & Solutions

Q1: Find the length of each Product name.

Solution:

1. Select 'Product' column.
2. Go to Transform tab.
3. Click Extract → Length.
4. New column shows number of characters.

Q2: Find the length of each Customer name.

Solution: Select 'Customer' column → Transform → Extract → Length.

Q3: Find the length of Salesperson names.

Solution: Select 'Salesperson' column → Transform → Extract → Length.

Q4: Compare lengths of Product vs Category names.

Solution: Apply Extract → Length on both 'Product' and 'Category' → Compare values in Power BI table.

Q5: Extract length of Region names.

Solution: Select 'Region' column → Extract → Length.

Q6: Create a column showing whether Product name length > 10.

Solution: After applying Length → Add Conditional Column → if [Length] > 10 then 'Yes' else 'No'.

Q7: Find max and min lengths of all Customer names.

Solution: Extract Length on 'Customer' → Load to Power BI → Use Aggregation (Max, Min).

Q8: Extract length of Product after replacing underscores with spaces.

Solution: Replace Values '_' → ' ' → then Extract → Length.

Q9: Create a column showing difference in length between Product and Customer.

Solution: Extract Length for both → Add Custom Column = [Product Length] - [Customer Length].

Q10: Find average length of Salesperson names.

Solution: Extract Length for 'Salesperson' → Load to Power BI → Use Average in a card visualization.

Q11: Extract first 3 characters of each Product.

Solution: Select 'Product' → Extract → First Characters → Enter 3.

Q12: Extract first 5 characters of Customer names.

Solution: Select 'Customer' → Extract → First Characters → Enter 5.

Q13: Extract only the first letter of Region.

Solution: Select 'Region' → Extract → First Characters → Enter 1.

Q14: Extract first 2 digits of ID.

Solution: Select 'ID' (convert to text if needed) → Extract → First Characters → Enter 2.

Q15: Extract first 4 characters of Salesperson names.

Solution: Select 'Salesperson' → Extract → First Characters → Enter 4.

Q16: Create a new column showing first character of Category.

Solution: Select 'Category' → Extract → First Characters → Enter 1.

Q17: Extract first 7 characters of Product and check duplicates.

Solution: Extract First 7 → Use Remove Duplicates in Power Query.

Q18: Extract first 6 characters of Customer names.

Solution: Select 'Customer' → Extract → First Characters → Enter 6.

Q19: Extract first 10 characters of Salesperson and compare with full name.

Solution: Extract → First 10 → Add a Custom Column comparing Extracted vs Original.

Q20: Extract first 3 characters of Region, then uppercase them.

Solution: Extract First 3 → Transform → Format → UPPERCASE.

Q21: Extract last 2 characters of Product names.

Solution: Select 'Product' → Extract → Last Characters → Enter 2.

Q22: Extract last 4 characters of Customer names.

Solution: Select 'Customer' → Extract → Last Characters → Enter 4.

Q23: Extract last 3 characters of Salesperson names.

Solution: Select 'Salesperson' → Extract → Last Characters → Enter 3.

Q24: Extract last 1 character of Category.

Solution: Select 'Category' → Extract → Last Characters → Enter 1.

Q25: Extract last 2 digits of ID.

Solution: Convert ID to text → Extract → Last Characters → Enter 2.

Q26: Extract last 5 characters of Product names.

Solution: Select 'Product' → Extract → Last Characters → Enter 5.

Q27: Extract last 7 characters of Customer names.

Solution: Select 'Customer' → Extract → Last Characters → Enter 7.

Q28: Extract last 6 characters of Salesperson.

Solution: Select 'Salesperson' → Extract → Last Characters → Enter 6.

Q29: Extract last 3 characters of Region names.

Solution: Select 'Region' → Extract → Last Characters → Enter 3.

Q30: Extract last character of Product, then check if it's numeric.

Solution: Extract Last 1 → Add Custom Column: if Value is Number then 'Yes' else 'No'.

if Value.Is(Number.FromText(Text.End([Product],1)), Int64.Type) then "Yes" else "No"

Q31: From Product, extract characters 2–5.

Solution: Select 'Product' → Extract → Range → Start 2, Number of Characters 4.

Q32: From Customer, extract characters 4–8.

Solution: Select 'Customer' → Extract → Range → Start 4, Characters 5.

Q33: From Salesperson, extract characters 3–6.

Solution: Select 'Salesperson' → Extract → Range → Start 3, Characters 4.

Q34: From Region, extract characters 2–4.

Solution: Select 'Region' → Extract → Range → Start 2, Characters 3.

Q35: From Category, extract characters 1–3.

Solution: Select 'Category' → Extract → Range → Start 1, Characters 3.

Q36: From Product, extract characters 5–9.

Solution: Select 'Product' → Extract → Range → Start 5, Characters 5.

Q37: From Customer, extract characters 2–7.

Solution: Select 'Customer' → Extract → Range → Start 2, Characters 6.

Q38: From Salesperson, extract characters 4–10.

Solution: Select 'Salesperson' → Extract → Range → Start 4, Characters 7.

Q39: From Product, extract characters 1–2 (first two only).

Solution: Select 'Product' → Extract → Range → Start 1, Characters 2.

Q40: From Region, extract characters 3–5.

Solution: Select 'Region' → Extract → Range → Start 3, Characters 3.

Q41: Extract text before underscore (_) in Product.

Solution: Select 'Product' → Extract → Text Before Delimiter → '_'.

Q42: Extract text after underscore (_) in Product.

Solution: Select 'Product' → Extract → Text After Delimiter → '_'.

Q43: Extract text between underscore (_) and end in Product.

Solution: Select 'Product' → Extract → Text Between Delimiters → From '_' to End.

Q44: Extract text before number in Product (e.g., 'Product').

Solution: Use Text Before Delimiter → '0-9' (numeric).

Q45: Extract text after number in Product (if any extra text added).

Solution: Use Text After Delimiter → '0-9'.

Q46: Extract text before delimiter '_' in Customer names (if they have).

Solution: Select 'Customer' → Extract → Text Before Delimiter → '_'.

Q47: Extract text between 'Person_' and the number in Salesperson.

Solution: Select 'Salesperson' → Extract → Text Between Delimiters → 'Person_' and End.

Q48: Extract numeric part of Product using delimiter.

Solution: Extract Text After '_' → This gives number part.

Q49: Extract text before space in Category (if multiple words exist).

Solution: Select 'Category' → Extract → Text Before Delimiter → Space.

Q50: Extract first and last names from Salesperson (if formatted as 'First_Last').

Solution: Extract Text Before '_' = First Name → Extract Text After '_' = Last Name.
